ESD Rubber Static Control Tile is a specialized flooring material designed to dissipate electrostatic discharge (ESD) in environments where static electricity poses a risk to sensitive electronic equipment or components. Made from conductive or static-dissipative rubber compounds, these tiles help maintain a controlled electrical resistance, safely channeling static charges to a ground point. Commonly used in electronics manufacturing, cleanrooms, laboratories, and data centers, ESD rubber tiles not only protect devices from damage but also reduce the risk of fire or malfunction caused by uncontrolled static discharges. They are durable, chemical-resistant, and compliant with industry standards for static control.
