The global ESD-Safe Handheld Barcode Readers market size is predicted to grow from US\$ 164 million in 2025 to US\$ 230 million in 2031; it is expected to grow at a CAGR of 5.8% from 2025 to 2031.

Electrostatic discharge (ESD) is a swift discharge of electric current between two objects with different charges and different numbers of electrons. This exchange of electrons creates a large electromagnetic field buildup, resulting in ESD. Certain electronic devices are vulnerable to low-voltage ESD. For example, a hard drive is susceptible to just 10 volts. Integrated circuits (IC) are also prone to ESD and may be permanently damaged by high-voltage currents. Certain work environments demand a static-free zone to protect the production process or for the safety of the work space.

The market for ESD-safe handheld barcode readers is gradually gaining prominence, attracting significant attention from industries such as electronics manufacturing, healthcare equipment, warehousing, and logistics. The market size is expanding steadily due to the widespread use of electronic devices, driving increased demand for ESD-safe technology. These handheld barcode readers play a critical role in highly sensitive electronic environments, ensuring the safety of equipment and data integrity. Future developments will focus on enhancing the effectiveness of ESD-safe technology while expanding application areas to meet the growing market demands.
