ESD valves are short for Emergency Shutdown valves, which are used to quickly shut off the flow of fluids in fluid piping systems in emergency situations to prevent accidents or reduce accidental damage. These valves are commonly used in industrial production facilities, chemical plants, and oil and gas extraction. They shut down piping systems quickly and reliably in response to hazardous situations such as fires, leaks, overpressure, etc., to safeguard equipment and personnel. ESD valves are usually equipped with electric or pneumatic actuators and are connected to a monitoring system for automated operation and remote control.

The global ESD Valve market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
