The global Esterquat market size is predicted to grow from US\$ 507 million in 2025 to US\$ 703 million in 2031; it is expected to grow at a CAGR of 5.6% from 2025 to 2031.

Esterquat is defined as reaction products of long chain DEEDMAC of different origin with substituted ammonium compounds.

Esterquats are a widely used class of cationic surfactants. They were introduced in the early 1980s when concerns were raised about the environmental profile of DHTDMAC (Di-Hardened Tallow DiMethyl Ammonium Chloride) a fabric conditioner. Esterquats are similar to DHTDMAC except that ester links were introduced into the headgroup of the molecules, making them more subject to degradation by hydrolysis and greatly facilitating biodegradation.

Most, if not all, fabric conditioners marketed in Europe are now comprised of the three Esterquat groups, TEAQ (triethanol amine quat), DEEDMAC (diethyloxyester dimethylammonium chloride), and HEQ ((Z)-2 hydroxy-3-[(1-oxo-9-octadecenyl)oxy] propyltrimethylammonium chloride).

They combine a good environmental profile, especially in terms of ready and ultimate biodegradability (OECD criteria), with the structural features required for an effective fabric conditioner.

The major players in global Esterquat market include Stepan Company, Kao Chemicals, Evonik Industries, etc. The top 3 players occupy about 35% shares of the global market. Europe and North America are main markets, they occupy about 65% of the global market. TEAQ is the main type, with a share about 70%. Household Cleaning is the

main application, which holds a share about 60%.
