The global Esters of Acrylic Acid market size is predicted to grow from US\$ 9433 million in 2025 to US\$ 13138 million in 2032; it is expected to grow at a CAGR of 4.7% from 2026 to 2032.

Esters of acrylic acid are monomeric compounds formed by the esterification of acrylic acid with various alcohols. These reactive monomers are produced via continuous esterification in large-scale industrial plants. They undergo free-radical polymerization to produce acrylic polymers and copolymers, imparting flexibility, weatherability, adhesion, UV resistance, and water resistance to the final polymer matrix. In 2025, global esters of acrylic acid production reached approximately 5,672K ton, with an average global market price of around USD 1,700 per ton. A factory gross profit of USD 476 per ton with 28% gross margin. A single line full machine capacity production is around 40K ton per line per year. The upstream is dependent on propylene, methanol and ethanol. The downstream demand is concentrated in paints and coatings, adhesives and sealants and textiles. n-Butyl Acrylate (BA) use in waterborne exterior paint, primary binder providing flexibility for expansion/contraction with temperature changes and prevents cracking on exterior walls. China and India market are driven by large producer and consumer. South Korea market maintain strong export position.

United States market for Esters of Acrylic Acid is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
