The global Etched AG glass market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Etched AG glass is made through a special chemical process. Its characteristic is that the reflective surface of the original glass becomes a matte diffuse reflective surface. It can blur the reflection effect, prevent glare, and also reduce the reflectivity and reduce light and shadow. Anti-glare products have strong surface anti-corrosion and anti-scratch properties. However, etching AG is still on the glass surface, and the product life is equivalent to that of general tempered glass. The uniformity of etched AG particles cannot be achieved by other processes. And the highest gloss of Etched AG glass can reach 110, and the transmittance is above 90 (etching AG does not affect the transmittance of the glass itself). Therefore, Etched AG glass will be the first choice for the high-end touch screen industry.

United States market for Etched AG glass is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
