ETFE Monofilament is a monofilament made of fusible fluororesin ETFE (ethylene-tetrafluoroethylene copolymer). ETFE monofilament has many excellent properties, such as its melting point between 256 and 280°C, crystallinity of up to 50% to 60%, and excellent mechanical properties. Its impact resistance, hardness, cold flow resistance and creep resistance are better than PTFE and FEP. In addition, ETFE monofilament also has good chemical resistance, high operating temperature, low friction coefficient and excellent radiation resistance. Therefore, ETFE monofilaments are widely used in many fields such as medical, chemical, fishery, electronics, aerospace, etc., especially in application scenarios that require high chemical resistance, high temperature resistance, and radiation resistance. For example, it can be used in the manufacture of products such as components around car windows and filters for high-viscosity liquids.

The global ETFE Monofilament market size is projected to grow from US\$ 223 million in 2024 to US\$ 334 million in 2030; it is expected to grow at a CAGR of 7.0% from 2024 to 2030.
