An Ethernet coupler is a plastic or metal connector that has open ends on both sides and these open ends are usually the female ports. These tiny, rectangular couplers are designed to join two network cables in order to connect different devices. In layman's terms, the Ethernet coupler functions as a knot. When inserting network cables into the Ethernet coupler, the wires in the coupler will make contact with those in the cables and then the connection will be made.

The global Ethernet Coupler market size is projected to grow from US$ million in 2024 to US$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
