The telecommunications industry, cloud applications, TV-on-demand, video services, and online games have great demands for high bandwidth. Wired transport connections offer greater bandwidth, enhanced reliability and agility, and greater security than wireless communications. For example, a wired LAN uses Ethernet technology to provide a bandwidth of 100Mbps, while a wireless network provides a maximum bandwidth of about 11Mbps. Also, wireless transmissions are slower in underwater operations due to the use of low frequencies to keep attenuation (loss of power from the transmitted signal) to a minimum and prevent slowing down of the transmission rate. If the attenuation must be reduced from 5.4 dB to 0.4 dB, the frequency must be reduced from 1.8 MHz to 0.01 MHz. However, wired communication is not subject to such limitations, making it a faster medium than wireless transmission. Hence, the increased demand for higher bandwidth and the need for faster transmission is virtually driving the Ethernet adapter market. The Ethernet adapter market is expected to expand owing to the increasing demand for higher bandwidth connections across various industries. Growing deployment in data centers is also expected to drive the Ethernet adapter market. The Ethernet connection provides excellent reliability and signal stability. It reduces the possibility of external intervention and security breaches. Taking these factors into consideration, the Ethernet adapter market is expected to grow exponentially in the near future.

This report presents a comprehensive overview, market shares, and growth opportunities of Ethernet Media Access Receive Transceivers market by product type, application, key manufacturers and key regions and countries.
