A Data Center Ethernet Switch is a specialized networking device designed to interconnect various servers, storage systems, and other networking devices within a data center environment. Unlike traditional Ethernet switches used in general office or Internet networks, data center ethernet switches are optimized for high performance, low latency, and reliability to meet the demanding requirements of modern data centers. These switches typically feature advanced capabilities such as high-speed ports, low latency switching fabric, high-density port configurations, and support for virtualization technologies like VLANs (Virtual Local Area Networks) and VXLAN (Virtual Extensible LAN). They play a crucial role in enabling efficient data traffic management, scalability, and seamless connectivity within large-scale data center infrastructures, supporting critical applications such as cloud computing, big data analytics, and high-performance computing (HPC).

The global Ethernet Switch for Cloud Computing Provider market size is projected to grow from US$ 12130 million in 2024 to US$ 19890 million in 2030; it is expected to grow at a CAGR of 8.6% from 2024 to 2030.
