The global Ethyl Acetate for Ink market size is predicted to grow from US\$ 672 million in 2025 to US\$ 930 million in 2032; it is expected to grow at a CAGR of 4.8% from 2026 to 2032.

Ethyl acetate for ink is an organic solvent specifically used in printing ink systems, with good solubility, moderate evaporation rate, and low toxicity. It is mainly used in ink formulations to dissolve resins, adjust ink viscosity, and improve flowability and drying performance during printing, thereby ensuring the clarity, adhesion, and surface quality of printed patterns. It is widely used in gravure printing ink, flexographic printing ink, packaging printing ink, and some electronic printing ink fields, and is one of the important solvent raw materials commonly used in ink manufacturing processes. In 2025, global Ethyl Acetate for Ink production reached approximately 653.21 K MT, with an average global market price of around US\$ 1,052 per MT.

With the continuous growth of the packaging and printing industry, the increasing demand for flexible packaging driven by e-commerce logistics, and the continuous expansion of environmentally friendly ink applications, the market for ethyl acetate used in ink maintains stable demand. At the same time, the industry's requirements for low impurity, low odor, and stable volatile products are gradually increasing, promoting production enterprises to continuously upgrade in refining processes and environmentally friendly production. In the future, the market will develop towards high-purity, environmentally friendly, and customized solvents.
