Ethyl Methacrylate, also known as EMA, is a chemical compound with the molecular formula C6H10O2. It is an ester of methacrylic acid. EMA is a colorless liquid with a characteristic fruity odor. It is primarily used as a monomer in the production of polymers and copolymers, particularly in the manufacturing of acrylic resins and coatings. EMA exhibits excellent adhesion, durability, and weatherability, making it suitable for various applications such as automotive coatings, adhesives, and dental materials. It can also be used as a flavoring agent, fragrance, or intermediate in chemical synthesis.

The industry trend of Ethyl Methacrylate is driven by factors such as increasing demand for high-performance coatings, adhesives, and dental materials. The growing automotive sector, construction industry, and the need for advanced materials contribute to the demand for EMA. The industry trend also emphasizes the development of environmentally friendly and low VOC (volatile organic compound) products, leading to more sustainable formulations and production processes. Additionally, there is a focus on improving the properties and functionalities of Ethyl Methacrylate derivatives to meet specific application requirements, promoting innovation and advancements in this field.
