The global Ethyldiphenylphosphine market size is predicted to grow from US\$ 159 million in 2025 to US\$ 262 million in 2032; it is expected to grow at a CAGR of 7.4% from 2026 to 2032.

Ethyldiphenylphosphine is an organophosphorus compound with the formula $C_2H_5P(C_6H_5)_2$, typically used as a specialty ligand in homogeneous catalysis, coordination chemistry, and fine chemical synthesis, particularly in pharmaceuticals and advanced materials. It functions as a soft donor ligand, stabilizing transition metal complexes and enabling selective reactions such as hydrogenation, cross-coupling, and polymerization. The supply chain begins upstream with key raw materials including benzene (for phenyl groups), phosphorus trichloride (PCl_3), and ethylating agents (e.g., ethyl halides), which are derived from petrochemical and phosphorus industries. Midstream production involves Grignard or organolithium reactions to introduce phenyl groups onto phosphorus, followed by controlled ethyl substitution and purification under inert conditions due to air sensitivity. Downstream, Ethyldiphenylphosphine is supplied to research institutions, catalyst manufacturers, and fine chemical/pharmaceutical companies, often through specialty chemical distributors, with stringent handling, packaging, and logistics requirements due to its reactivity and odor. In 2025, global Ethyldiphenylphosphine output was about 25,000 tons with 32,000 tons of capacity, average prices of USD 6,000-11,000 per ton, and gross margins around 36%.

United States market for Ethyldiphenylphosphine is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Ethyldiphenylphosphine is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Ethyldiphenylphosphine is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
