## Abstracts

The global Ethyldiphenylphosphine Oxide market size is predicted to grow from US\$ 233 million in 2025 to US\$ 372 million in 2032; it is expected to grow at a CAGR of 7.0% from 2026 to 2032.

Ethyldiphenylphosphine Oxide (EDPPO) is an organophosphorus compound featuring a phosphine oxide functional group bonded to two phenyl rings and one ethyl group, known for its strong polarity, thermal stability, and coordination ability with metals. It is widely used as a ligand or intermediate in organic synthesis, catalysis (e.g., transition-metal catalysis), pharmaceutical intermediates, and specialty materials such as flame retardants and electronic chemicals. The supply chain begins with upstream raw materials including benzene (for phenyl groups), ethyl halides (e.g., ethyl chloride or ethyl bromide), and phosphorus derivatives (such as phosphorus trichloride,  $\text{PCl}_3$ ). These are converted into intermediates like ethyldiphenylphosphine via Grignard or Friedel-Crafts-type reactions, followed by controlled oxidation (using oxidants like hydrogen peroxide) to produce the phosphine oxide. Midstream involves purification (distillation, recrystallization) and formulation into reagent-grade or electronic-grade products. Downstream, EDPPO is supplied to fine chemical manufacturers, pharmaceutical companies, and advanced material producers, often through specialty chemical distributors, with key production concentrated in regions with strong organophosphorus chemistry capabilities such as China, Europe, Japan, and the United States. In 2025, global Ethyldiphenylphosphine Oxide output was about 30,000 tons with 40,000 tons of capacity, average prices of USD 7,000-18,000 per ton, and gross margins around 32%.
