## Abstracts

The global Ethylene Glycol-based Antifreeze market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Ethylene Glycol-based Antifreeze is a coolant composed primarily of ethylene glycol, designed to regulate engine temperature by preventing freezing in cold temperatures and overheating in hot conditions. Mixed with water, it forms a solution that raises the coolant's boiling point and lowers its freezing point. This antifreeze protects the engine from corrosion, enhances heat transfer, and prevents the formation of ice crystals, safeguarding vehicle cooling systems. It's widely used in automobiles, HVAC systems, and industrial applications due to its effectiveness in maintaining optimal operating temperatures and preventing damage caused by extreme temperatures.

The industry trend for Ethylene Glycol-based Antifreeze revolves around eco-friendly formulations and extended performance. Manufacturers are increasingly focusing on developing antifreeze solutions that are less harmful to the environment and safer for use. This includes the creation of non-toxic or less-toxic alternatives and biodegradable formulations. Additionally, there's a push for long-lasting antifreeze products that offer extended protection for engines and cooling systems, reducing the frequency of replacements and promoting sustainability in automotive and industrial applications. Moreover, advancements in technology aim to enhance the efficiency of these coolants while meeting environmental standards and regulations.
