The global Ethylene Methacrylic Acid Copolymers (EMAA) market size is predicted to grow from US\$ 96 million in 2025 to US\$ 152 million in 2032; it is expected to grow at a CAGR of 6.8% from 2026 to 2032.

Ethylene Methacrylic Acid Copolymers (EMAA) are thermoplastic resins made by free radical polymerization of ethylene and methacrylic acid in an autoclave. Their molecular structure combines the flexibility and chemical resistance of polyethylene with the adhesion and transparency of methacrylic acid, and also has excellent oil resistance, impact resistance and heat sealing properties.

The global Ethylene Methacrylic Acid Copolymers (EMAA) market is highly concentrated. The major global manufacturers of EEA include Dow-Mitsui Polychemicals, Sumitomo Chemical, INEOS, etc.

The performance of ethylene-methacrylic acid copolymer (EMAA) depends on the content of MAA. Its melting point, rigidity, and tensile yield strength are all lower than those of polyethylene, and decrease with the increase of MAA content. The air permeability and environmental stress cracking resistance increase with the increase of MAA content. EMAA has a promising market prospect in the future. With the continuous growth of demand for high-performance materials in various industries and the continuous advancement of technology, EMAA will continue to play its unique advantages and usher in wider applications and a larger market share.
