The research report highlights the growth potential of the global Ethylene Octene Copolymer market. Ethylene Octene Copolymer are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Ethylene Octene Copolymer. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Ethylene Octene Copolymer market.

EOC is an ethylene based elastomer, so it brings an excellent compatibility with polyolefins, such as polyethylene and PP. The presence of the octene monomer in EOC causes a lower level of crystallinity and a higher flexibility in the copolymer. EOC can be considered as an elastomeric polymer, and usually the octene content in the copolymer varies under 20?wt. %. Blends of PP/EOC may provide enhanced impact properties and can be used, for example, in extruded or moulded automotive exterior and interior parts, housing appliances, and other low-temperature applications. Pelletized EOC exhibits easy handling, mixing, and processability. Based on these properties, EOC is currently being used as an impact modifier of PP to replace ethylene propylene rubber (EPR) and ethylene propylene diene rubber (EPDM).

Major companies in the industry include Dow, SABIC SK Nexlene Company (SSNC), LG Chemical, etc., accounting for 55.29%, 17.83% and 7.57% of their revenues respectively in 2019. By region, China has the highest share of value, reaching 35.6 percent in 2019.
