The global Ethylhexyl Palmitate for Cosmetics market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Ethylhexyl palmitate for cosmetics is a high-purity higher fatty acid ester product, mainly used as a raw material for cosmetics, and is an excellent skin softener. At room temperature, ethylhexyl palmitate is a clear and transparent liquid, odorless, insoluble in water, and soluble in most solvents. It is stable in nature, not easy to oxidize or produce odor, and is often used as a solvent and emollient in cosmetics, which can make the skin soft, tender and smooth without feeling greasy. In addition, it can balance oil secretion, prevent excessive oil secretion of the skin, and will not make the skin dry, which helps to promote skin metabolism and improve skin condition. At the same time, ethylhexyl palmitate is also commonly used in hair care products, which can make hair look more shiny after use. However, due to its small molecules, it is easy to penetrate into the pores, and excessive use may cause keratinization, waxy yellow, rough yellow and other problems on the skin, so it is necessary to pay attention to the appropriate amount when using it.

As one of the important raw materials in the cosmetics industry, the market size of ethylhexyl palmitate has continued to grow in recent years. This is mainly due to the continuous expansion of the cosmetics market and the increasing demand of consumers for high-quality and high-performance cosmetics. In addition, the production technology and application fields of ethylhexyl palmitate are also constantly developing and innovating. On the one hand, with the advancement of science and technology, the production process of ethylhexyl palmitate has been optimized and improved, which has improved production efficiency and product quality. On the other hand, with the

continuous development of the cosmetics industry, the application field of ethylhexyl palmitate in cosmetics is also expanding. It is not only widely used in traditional cosmetics such as anti-aging creams and facial moisturizers, but also gradually expanded to new cosmetics such as sunscreens and bath salts. In short, the market for ethylhexyl palmitate for cosmetics shows a trend of continuous growth and continuous innovation. In the future, the application prospects of ethylhexyl palmitate in the cosmetics industry will be broader.
