## Abstracts

The global Euphorbia Humifusa Extract market size is predicted to grow from US\$ 12.74 million in 2025 to US\$ 19.93 million in 2032; it is expected to grow at a CAGR of 6.6% from 2026 to 2032.

In 2025, the global production of Euphorbia Humifusa extract was approximately 420 tons, with an average selling price of about US\$31 per kilogram. The production capacity in 2025 was 580 tons, with an average gross profit margin of approximately 20-30%. Euphorbia Humifusa extract is a natural active substance prepared from the dried whole plant of Euphorbia Humifusa, a traditional Chinese medicinal herb, using modern extraction techniques. This extract is rich in various bioactive components such as flavonoids, tannins, triterpenes, and phenolic acids, possessing traditional efficacy and modern pharmacological effects including clearing heat and detoxifying, cooling blood and stopping bleeding, antibacterial and anti-inflammatory properties, and antioxidant effects. It is widely used in pharmaceuticals, health products, skincare products, and feed additives.

The upstream raw materials for Euphorbia Humifusa extract mainly consist of wild or cultivated whole plants of Euphorbia Humifusa. The core is the Euphorbia Humifusa plant itself, and its quality depends on the origin, harvesting season, and variety. Downstream applications are concentrated in the animal husbandry sector, mainly as a natural feed additive for livestock and aquaculture, to exert its antibacterial, hemostatic, and immune-enhancing functions. It is also used in small quantities in veterinary drug preparations and pet health products. Its demand is directly related to the trend of reducing/banning antibiotics in animal husbandry and the demand for green farming solutions.

Euphorbia Humifusa extract, a traditional Chinese herbal extract, has been gaining increasing attention in the global market for natural plant-based medicines and health products in recent years. Euphorbia Humifusa, also known as Huanglian, possesses strong antibacterial, anti-inflammatory, and antioxidant pharmacological effects. Its main active component, berberine, is widely used in the treatment of bacterial infections, digestive system diseases, and metabolic disorders. With the increasing consumer interest in natural, plant-based health products and alternative medicine, the market demand for Euphorbia Humifusa extract has grown significantly.

According to market research, particularly in the Asia-Pacific region and North America, Euphorbia Humifusa extract is being increasingly used in health supplements, functional foods, and herbal preparations. With growing concerns about immune regulation, gastrointestinal health, and cardiovascular protection, Euphorbia Humifusa extract is gradually being integrated into the modern health product sector, building upon its traditional medicinal uses. It is expected that the market for Euphorbia Humifusa extract will continue to grow in the coming years as acceptance of natural therapies increases.

However, the Euphorbia Humifusa extract market also faces several challenges, such as unstable raw material supply, standardization of production, and product quality control issues. Furthermore, with increasing market competition, companies need to focus more on innovation and technological breakthroughs in product development, differentiated marketing, and international market expansion. Overall, the market for Euphorbia Humifusa extract has broad prospects, but the industry still needs to address a series of challenges.
