An EV Battery Cell Cyclers is a specialized charge–discharge testing system used to evaluate and condition lithium-ion battery cells for electric vehicles. It precisely controls current, voltage, and temperature while repeatedly cycling the cell through charging and discharging profiles that simulate real vehicle operation. The equipment is used during cell R&D, formation and aging in gigafactories, and quality validation to measure capacity, energy efficiency, internal resistance, cycle life, safety behavior, and degradation characteristics. Because every EV battery cell must undergo formation cycling before shipment, the cyclers is one of the core pieces of equipment in lithium-ion battery manufacturing and testing infrastructure. In 2025, global EV Battery Cell Cyclers production reached approximately 8514 units, with an average global market price of around US\$50000 usd per unit. The production capacity for EV Battery Cell Cyclers 2025 was approximately 9000 units. The typical gross profit margin for EV Battery Cell Cyclers between 20% and 40%.
