The global EV Battery Cooling Systems market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The optimal operating temperature range of the power battery is about 20-30°C. At low temperature, the battery capacity is low, and the charge and discharge performance is poor; at high temperature, the battery cycle life will be shortened, and safety problems such as explosion may even occur at high temperature. Multiple battery cells form a battery pack in series and parallel mode, and the heat generated during charging and discharging affects each other. Keeping the power battery pack to work within a reasonable temperature range requires a sophisticated electric vehicle battery cooling system.

United States market for EV Battery Cooling Systems is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for EV Battery Cooling Systems is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
