The global EV Camera Module market size is predicted to grow from US\$ 4065 million in 2025 to US\$ 11780 million in 2031; it is expected to grow at a CAGR of 19.4% from 2025 to 2031.

Camera Module for EV refers to a set of cameras integrated into an Electric Vehicle (EV) for various purposes, including safety, navigation, and advanced driver assistance systems (ADAS). These camera modules play a crucial role in enhancing the vehicle's perception of its surroundings.

**Increasing Adoption of Advanced Driver Assistance Systems (ADAS):** The automotive industry was experiencing a growing demand for ADAS, and camera modules played a crucial role in enabling features such as lane departure warning, automatic emergency braking, adaptive cruise control, and parking assistance.

**Rise of Autonomous Driving:** Camera modules were becoming increasingly important for the development of autonomous vehicles. The integration of cameras with other sensors like radar and lidar was a key trend, allowing for more comprehensive perception and improved decision-making capabilities.

**Cost Reduction and Miniaturization:** Manufacturers were working on ways to reduce the cost of camera modules and make them more compact. This was important for wider adoption across different vehicle segments, including mass-market electric vehicles.

**Increased Number of Cameras per Vehicle:** The number of cameras per vehicle was increasing. This trend was driven by the need for more comprehensive coverage around the vehicle, supporting applications like 360-degree surround-view systems.
