Abstracts

The global EV Cell Winding Machine market size is predicted to grow from US$ 2034 million in 2025 to US$ 3494 million in 2032; it is expected to grow at a CAGR of 8.2% from 2026 to 2032.

In 2024, global EV Cell Winding Machine production reached approximately 503.3 K units, with an average global market price of around US$ 3,827 per unit. An EV cell winding machine is a key piece of automated equipment used in the production of lithium - ion battery cells for electric vehicles. It utilizes a precise mechanical structure and advanced control technology to automatically align, wind, cut, and encapsulate positive and negative electrode materials, ultimately forming a stable cell structure. This kind of equipment can significantly increase production speed and effectively reduce errors caused by manual operation, ensuring the consistency and reliability of each batch of cells. It usually has the characteristics of high - precision, high - efficiency, intelligence, and low maintenance cost, and is an essential equipment in the lithium - ion battery production process.

The upstream of the EV cell winding machine supply chain mainly involves the suppliers of raw materials and components, including steel, aluminum, plastic, bearings, motors, and electronic components such as PLCs, inverters, and sensors. These suppliers provide the necessary materials and parts for the production of cell winding machines, and their product quality and supply stability directly affect the performance, cost, and production efficiency of the winding machines.

The downstream is mainly lithium - ion battery manufacturers, which are the main users of EV cell winding machines. They use these machines to produce lithium - ion batteries for electric vehicles, 3C electronics, energy storage, and other fields. The development
