Harness is the logical arrangement of wires, terminals and connectors, which runs through the whole vehicle, transmits data and power, and effectively 'connects' many different components. The network transmits energy and information in a way similar to the human circulatory system and central nervous system. A variety of solid materials can be used to make wire harnesses. PVC, vinyl, thermoplastic elastomer, polyurethane and polyethylene are the most popular. The specific substance used in the harness depends largely on where it is used. Harness is the main electrical component of automobile. It consists of many wires, which transmit data and power from many parts of the car.
