The global EVA Encapsulation Film market size is predicted to grow from US\$ 14674 million in 2025 to US\$ 20623 million in 2032; it is expected to grow at a CAGR of 5.0% from 2026 to 2032.

In 2025, global production of EVA Encapsulation Film reached 12 billion square meters, with an average price of USD 1.25 per square meter, a production capacity of 15 billion square meters, and a gross margin of 22%.

EVA Encapsulation Film is a functional film material based on ethylene-vinyl acetate (EVA) copolymer, formulated with additives such as crosslinking agents, antioxidants, and UV absorbers. It is widely used in photovoltaic module lamination to provide bonding, sealing, moisture resistance, and protection for solar cells, while offering high transparency, electrical insulation, and weather resistance.

The EVA Encapsulation Film market is primarily driven by the photovoltaic industry, with growing global solar installations continuously increasing demand for high-performance encapsulation materials. China is the largest production and consumption market, with a relatively high industry concentration where leading players hold advantages in technology and scale. Meanwhile, the development of double-glass modules, N-type cells, and high-power modules is raising requirements for higher transparency, lower degradation, and enhanced weather resistance, driving the industry toward premium and differentiated products.
