The global EVA (ethylene vinyl acetate) Film market size is predicted to grow from US$ 91.3 million in 2025 to US$ 106 million in 2031; it is expected to grow at a CAGR of 2.5% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

EVA film is based on the use of ethylene vinyl acetate copolymer, and additives.

EVA film, also known as environmentally friendly film, is a film produced by casting extrusion of EVA material. It is a new generation of environmentally friendly and degradable material. It is biodegradable. It will not cause harm to the environment when discarded or burned. The density is about 0.93, tasteless, no heavy metal, no phthalate, high transparency, soft and tough, super low temperature resistance (-70 degrees), water resistance, salt and other substances, high heat signature, etc. EVA films are a key encapsulation material used for traditional solar panel lamination.

China is the largest EVA Film market with about 58% market share. North America is follower, accounting for about 11% market share.The representative players in global EVA Film market are Hangzhou First (China), STR (United States), Sveck (China), Mitsui (Japan) and 3M (United States), dominating more than 50% market share. Bridgestone has announced it ceased all EVA-related operations, which changes the competition landscape.
