Abstracts

The global EVA Foam Molding Machine market size is predicted to grow from US\$ 420 million in 2025 to US\$ 693 million in 2032; it is expected to grow at a CAGR of 7.5% from 2026 to 2032.

In 2025, global EVA Foam Molding Machine production reached approximately 10,729 Units. The average price is approximately \$40,000. An EVA Foam Molding Machine is an industrial manufacturing machine used to process EVA (Ethylene-Vinyl Acetate) material into lightweight, flexible, and resilient foam products through controlled heating, foaming, and molding operations. The machine enables EVA to expand and solidify inside a mold, forming parts with specific density, cushioning, elasticity, and shape stability.

Gross Profit Margin Levels

From the perspective of the equipment manufacturing industry, the gross profit margin of EVA foam molding machines typically exhibits a tiered structure: 'standard models
Industry Driving Factors

The core demand for EVA foam molding machines stems from the long-term upgrades in 'lightweighting + shock absorption and rebound + composite appearance' by the footwear and sports protection industries. On the one hand, the footwear injection molding equipment market itself maintains steady expansion (publicly projected to continue growing until 2031), providing a stable foundation for EVA machine upgrades and capacity expansion. On the other hand, the related sub-markets of EVA foam materials are also showing faster growth expectations, driving equipment iteration in the sole/midsole segment for 'higher foaming consistency, lower energy consumption, and

shorter mold changeover time.' Simultaneously, the preference of shoe manufacturers for high-speed and large-scale production has led to the continued penetration of the 'multi-station turntable + automation' injection molding model; at the same time, the increasing pressure of carbon and chemical compliance for export and brand audits has also prompted some manufacturers to emphasize 'low-carbon/cleaner foaming and manufacturing solutions'.
