The global EVA market size is predicted to grow from US$ 6681 million in 2025 to US$ 8049 million in 2031; it is expected to grow at a CAGR of 3.2% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Ethylene vinyl acetate (EVA) is formed by the copolymerization of ethylene and vinyl acetate. It has excellent toughness property. When EVA is forged into a porous material, it acts similar to rubber due to its elastic property. EVA when compared with low-density polyethylene (LDPE) is three times more flexible. This material has various properties, such as low-temperature toughness, stress-crack resistance, ultraviolet radiation resistance, good barrier properties, and hot-melt adhesive waterproof properties.

In terms of geographic regions, APAC will be the major revenue contributor to the EVA market throughout the forecast period. China is the largest consumer of EVA in APAC. The rise in demand for flexible packaging and the growth of the footwear industry in China, is driving the demand for EVA market in the region.
