An evapotranspiration meter is a specialized instrument used to measure the sum of plant transpiration and soil evaporation (i.e., evapotranspiration). It is widely used in agriculture, water resource management, meteorological research, and ecological monitoring. By collecting meteorological data such as temperature, humidity, wind speed, and solar radiation, combined with plant canopy characteristics and surface conditions, it calculates the total amount of water lost from the ground and plants per unit time. This helps assess crop water requirements, formulate irrigation strategies, and analyze regional water cycle dynamics.Sales volume in 2024 is expected to be 330,000 units, with an average price of US$525 per unit. Annual production capacity is expected to be 40,000 units, with a gross profit margin of 58%.

United States market for Evapotranspiration Meter is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
