Evapotranspiration monitoring equipment is a type of instrument system used to monitor the total amount of surface water lost through soil evaporation and plant transpiration in real time or periodically. It is widely used in agricultural irrigation optimization, water resource scheduling, ecosystem research, and meteorological and environmental monitoring. It typically consists of sensors (such as those for temperature, humidity, wind speed, radiation, and soil moisture), a data collector, and an analysis platform. It can be deployed independently or integrated into smart agriculture and environmental monitoring systems, providing critical data support for precision irrigation, drought warning, and regional water balance assessment.Sales volume in 2024 is expected to be 330,000 units, with an average price of US$525 per unit. Annual production capacity is expected to be 40,000 units, with a gross profit margin of 58%.
