The global Evidence-Based Medicine Simulation Platform market size is predicted to grow from US\$ 852 million in 2025 to US\$ 1244 million in 2032; it is expected to grow at a CAGR of 5.6% from 2026 to 2032.

Evidence-based medical simulation platforms are educational tools created to address the limitations of traditional medical training, such as limited practical opportunities, high costs of clinical skills training, and the difficulty of realistically practicing medical error management. Since their emergence in the early 21st century with the development of computer technology and simulation science, the field of medical simulation training has made significant progress. Currently, evidence-based medical simulation platforms have evolved into integrated systems incorporating virtual cases, high-fidelity physiological models, real-time feedback systems, and artificial intelligence evaluation. They are widely used in medical school education, residency training, clinical skills assessment, and continuing medical education, providing a professional educational support system that significantly improves the safety, standardization, and learning effectiveness of medical training.

Evidence-based medicine simulation platforms are transforming from 'tool providers' to 'ecosystem builders.' Through the deep integration of AI, big data, and cloud computing, they are enabling the entire chain from evidence generation to clinical translation. With breakthroughs in domestic technology and alignment with international standards, China is expected to play a leading role in the global medical simulation market, driving a revolutionary transformation of medical education models.
