## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

eVTOL batteries are similar in size compared to new energy vehicles. It is important for eVTOL batteries to maintain a good balance between energy and power. The power required for takeoff and landing is usually two to four times higher than the level required for electric vehicle acceleration. At the same time, sufficient cruising range requires energy, and the weight of the battery cannot be too large, otherwise it will increase the gravity that needs to be overcome during flight, requiring the battery to have a high energy density.

The global eVTOL Battery market size is projected to grow from US\$ million in 2023 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.

LP Information, Inc.
