eVTOL (Electric Vertical Take-Off and Landing) battery technology refers to the advanced battery systems used to power electric aircraft that can take off, hover, and land vertically. These batteries are crucial for the operation of eVTOL vehicles, which are being developed for urban air mobility, offering a sustainable alternative to traditional aircraft by reducing emissions and noise pollution. The technology involves high-energy-density lithium-ion or solid-state batteries that can deliver the necessary power for vertical lift while being lightweight enough to allow efficient flight. These batteries must provide high power output, rapid charging capabilities, and sufficient energy to ensure the aircraft can perform multiple short trips, which is essential for urban transportation. Additionally, safety and thermal management are critical aspects of eVTOL battery technology, given the high demands placed on these batteries during flight.

The global eVTOL Battery Technology market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
