The global eVTOL Electric Propulsion System market size is predicted to grow from US\$ 602 million in 2025 to US\$ 992 million in 2032; it is expected to grow at a CAGR of 7.4% from 2026 to 2032.

An eVTOL Electric Propulsion System is the subsystem in electric vertical takeoff and landing aircraft that generates thrust by converting electrical energy into mechanical power to drive propellers or rotors. It typically includes key components such as electric propulsion motors, motor controllers or inverters, propellers or ducted fans, and associated power electronics and control units that regulate motor speed and thrust output. Working together with the aircraft's energy storage and power distribution systems, the electric propulsion system enables vertical takeoff, hovering, transition, and forward flight while delivering high efficiency, low noise, and reduced emissions compared with conventional combustion-based propulsion. eVTOL Electric Propulsion Systems typically range in price from about \$1,000 for small prototype propulsion units to over \$100,000 for high-power aviation-grade systems, with the total propulsion system cost per aircraft often reaching hundreds of thousands of dollars depending on power level and configuration.

The upstream supply chain of the eVTOL Electric Propulsion System mainly includes suppliers of key components and technologies such as high-performance batteries or fuel cells, electric motors, power electronics devices including inverters and power semiconductors, electronic control units, sensors, and structural materials, as well as semiconductor manufacturing and advanced materials providers that support these components. The midstream consists of companies that design and integrate the flight power system, combining energy sources, power management and distribution units, motor controllers, and propulsion motors into a complete electrical propulsion

architecture. Downstream applications are primarily within the eVTOL aircraft industry, where these systems are integrated by aircraft manufacturers for use in urban air mobility, regional air transportation, cargo logistics, emergency medical services, and other advanced air mobility operations requiring electric vertical takeoff and landing capability.

United States market for eVTOL Electric Propulsion System is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
