The global eVTOL Exterior Damage-Resistant Coating market size is predicted to grow from US\$ 1231 million in 2025 to US\$ 3486 million in 2032; it is expected to grow at a CAGR of 16.3% from 2026 to 2032.

eVTOL exterior damage-resistant coatings are advanced protective coating systems specifically designed for electric vertical take-off and landing (eVTOL) aircraft to enhance durability, safety, and operational lifespan of exposed surfaces. These coatings provide resistance against mechanical damage such as abrasion, impact, and erosion, as well as environmental factors including UV radiation, moisture, temperature cycling, and chemical exposure. They are typically applied to composite airframes, rotor blades, leading edges, and landing structures. From a value chain perspective, upstream includes resins, additives, pigments, and nanomaterials; midstream involves coating formulation, compounding, testing, and aerospace certification; downstream demand comes from eVTOL manufacturers, aerospace OEMs, and MRO (maintenance, repair, and overhaul) service providers. In 2025, the average selling price is approximately US\$185 per kg, with global demand reaching around 6,800 tons. The industry maintains gross margins of 28%-45%, supported by high-performance material requirements, certification barriers, and growing demand in next-generation aviation platforms.

United States market for eVTOL Exterior Damage-Resistant Coating is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
