The global eVTOL Vertiport Charging Systems market size is predicted to grow from US\$ 12.23 million in 2025 to US\$ 178 million in 2032; it is expected to grow at a CAGR of 41.2% from 2026 to 2032.

In 2025, global sales of eVTOL vertiport charging systems were approximately 50 sets, with an average price of about US\$250,000 per set. eVTOL vertiport charging systems are ground-based charging equipment systems deployed at vertiports, airports and other eVTOL operating nodes to supply controlled AC or DC power to the propulsion batteries of electric vertical take-off and landing aircraft. These systems are designed to meet the high-voltage, high-power, rapid-turnaround and safety-redundancy requirements of eVTOL operations through insulation monitoring, high-voltage interlocking, emergency shutdown, charging-status communication and dynamic power control, and are mainly used in urban air mobility, regional air transport, aerial logistics, emergency response, low-altitude tourism, flight testing and military aviation support.

Market growth is being driven by the progress of eVTOL certification, demonstration operations and commercial aircraft deliveries, which is encouraging vertiports, airports and flight-test sites to install dedicated charging equipment in advance. The need for rapid aircraft turnaround is accelerating the adoption of high-voltage, high-power, liquid-cooled and battery-conditioning charging systems. In addition, government support for low-altitude transportation infrastructure, airport electrification, urban air mobility network development and the gradual standardization of aviation charging interfaces will broaden deployment and reduce barriers to large-scale adoption.
