The global Excimer EB Coating for Furniture market size is predicted to grow from US\$ 66.52 million in 2025 to US\$ 112 million in 2032; it is expected to grow at a CAGR of 8.1% from 2026 to 2032.

Excimer EB coating for furniture refers to a high-performance surface finishing material cured using Excimer ultraviolet radiation technology. It is mainly applied to furniture panels, cabinets, doors, and interior decorative boards. The excimer process utilizes short-wavelength UV irradiation under an inert atmosphere to create controlled micro-wrinkling on the coating surface, enabling ultra-matte appearance, anti-fingerprint performance, superior scratch resistance, and soft-touch texture. Compared with conventional UV coatings, excimer coatings achieve low gloss without matting agents while delivering higher durability and surface stability, making them a next-generation finishing solution for premium furniture manufacturing. Global sales are projected to reach approximately 5,200 tons in 2025. Due to its lack of photoinitiator requirements, high curing efficiency, and high equipment investment threshold, its average selling price is significantly higher than traditional UV wood coatings, at approximately US\$13,000 per ton. In terms of profitability, excimer EB coatings for furniture are technology-driven products, with industry gross margins typically maintained between 35% and 50%.
