Excipients for orally disintegrating tablets (ODTs) are inactive ingredients added to the formulation to impart desirable properties such as rapid disintegration, taste-masking, and mouthfeel enhancement. Key excipients commonly used in ODTs include superdisintegrants like crospovidone, sodium starch glycolate, and croscarmellose sodium, which promote tablet breakup upon contact with saliva. Binders such as microcrystalline cellulose and polyvinylpyrrolidone are employed to impart sufficient mechanical strength to the tablet while allowing for rapid disintegration. Sweeteners, flavors, and masking agents are added to improve palatability and mask the unpleasant taste of active pharmaceutical ingredients. Lubricants and glidants aid in tablet processing and ensure smooth tablet disintegration in the mouth. Overall, excipients play a crucial role in the formulation of ODTs, enabling convenient and patient-friendly oral dosage forms with rapid dissolution and administration.
