Excipients are inert substances that are generally used to manufacture different forms of drugs and are present in the finished products. Excipients help in providing long-term stability and make solid formulations bulkier. They also improve the functionality of drugs and make them safer.

Based on functionality, the pharmaceutical excipients market is segmented into fillers & diluents, binders, suspending & viscosity agents, flavoring agents & sweeteners, coating agents, colorants, disintegrants, lubricants & glidants, preservatives, emulsifying agents, and other functionalities. The large share of the fillers and diluents segment can be attributed to the increased use of fillers and diluents in the development and production of solid oral drugs.
