According to our LPI (LP Information) latest study, the global Excitation Systems market size was valued at US\$ 2193.3 million in 2023. With growing demand in downstream market, the Excitation Systems is forecast to a readjusted size of US\$ 2737.3 million by 2030 with a CAGR of 3.2% during review period.

The research report highlights the growth potential of the global Excitation Systems market. Excitation Systems are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Excitation Systems. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Excitation Systems market.

An excitation system is a system used for providing the necessary field current to the rotor winding of the synchronous machine.

In brushless excitation systems, the field current is supplied to synchronous machines without using slip rings and carbon brushes. As these systems do not require carbon brushes, losses due to contact resistance are low, thus resulting in low maintenance as compared to static excitation systems. Thus, low maintenance cost as compared to static excitation systems is expected to support the market growth for brushless excitation systems.
