The global Exhaust Analyzers market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

Automotive Exhaust Analyzer is a device that measures gas emissions of both diesel and gasoline fueled vehicles. Emission analyzer detects and displays the level of air pollutants such as carbon monoxide (CO), hydrocarbons (HC), and nitrous oxides for gasoline fueled vehicles. In case of diesel fueled vehicles the analyzer displays the opacity measurement.

Automotive Exhaust Analyzer comprises input devices, sensors, LCD display, and a microcontroller. The sensors used in the automotive emission analyzer are Iridium gas sensor and NOXO. These sensors detect gases such as carbon dioxide, hydrocarbon and nitrous oxide. The analyzer also consists of a temperature sensor, which provides rpm and temperature information to the user to start its operation.

Emission analyzer's is verified by comparing the results with land transportation office (LTO) registered emission testing center. Emission analyzer precision is derived by repeating the test for the same vehicle for about ten times. The accuracy measurements derived for carbon dioxide, hydrocarbon and nitrous oxide are 98.88%, 98.42%, and 98.08%.
