The global Exhaust Gas Treatment Device market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

An exhaust gas treatment device is a generic term for equipment that detoxifies toxic gases (flammable gases, natural gases, corrosive gases, toxic gases, volatile organic compound gases, global warming gases, PFC, odor, white and purple smoke, soot and dust, mist, etc.) generated in factories.

In the past, only highly toxic gases and acidic gases among toxic gases were treated, while relatively weakly toxic gases such as global warming gases were generally released into the atmosphere.

In recent years, however, in order to prevent environmental pollution and protect the natural environment, it has become common practice to discharge weakly toxic gases after appropriate non-toxic treatment, and exhaust gas treatment devices have become indispensable equipment. New exhaust gas treatment methods and exhaust gas treatment devices are being developed, and demand for these devices is expected to increase further in the future.

United States market for Exhaust Gas Treatment Device is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
