Exhaust thermometer is an instrument or sensor used to measure the exhaust temperature of an internal combustion engine. It is usually installed in the exhaust pipe or exhaust system of an internal combustion engine to monitor the temperature of the exhaust gas flow. The measurement results of the exhaust gas temperature meter are of great significance for evaluating the operating status, combustion efficiency and performance of the engine. This data can be used to adjust the engine's fuel supply, increase or decrease air intake, and perform fault diagnosis. In both diesel and gasoline engines, the exhaust gas temperature gauge is one of the common sensors used to protect the engine and improve its efficiency.
