The global Exosome Drug Delivery Services market size is predicted to grow from US\$ 1372 million in 2025 to US\$ 2444 million in 2032; it is expected to grow at a CAGR of 8.8% from 2026 to 2032.

Exosomes are a type of small vesicles secreted by cells, which carry biological molecules such as proteins, nucleic acids, and lipids. Exosomes have natural intracellular information transmission and regulatory functions, and therefore have attracted widespread attention in the field of drug delivery. Exosome drug delivery service is a professional service that provides exosomes for drug delivery and treatment.

Exosome drug delivery services, a cutting-edge sector in biopharmaceuticals, are experiencing rapid growth due to the inherent advantages of exosomes, such as low immunogenicity and strong tissue penetration. This market encompasses the entire process of exosome isolation and purification, drug loading, and functional validation.

North America is currently the world's largest market, holding approximately 45%-53% of the global market share thanks to its first-mover advantage and well-developed industry ecosystem. The region boasts significant R&D investment, a favorable regulatory environment, and a large concentration of pharmaceutical companies and research institutions, placing it at the forefront of technology development and clinical translation, and attracting substantial R&D collaborations and investments related to exosome delivery.
