## Abstracts

The global Exosome Extraction Service market size is predicted to grow from US$ 239 million in 2025 to US$ 356 million in 2032; it is expected to grow at a CAGR of 6.0% from 2026 to 2032.

Exosome Extraction Service is a specialized life science technology support service that provides a complete solution for isolating and purifying exosomes from complex biological samples provided by clients, utilizing standard or customized processes. Its core objective is to obtain high-purity, high-integrity, and bioactive exosomes. Key technologies include physical property-based ultracentrifugation, size exclusion chromatography, immunoaffinity-based capture methods, and chemical polymer-based precipitation methods. This service covers the entire process from sample pretreatment and exosome isolation to purity and concentration identification and result delivery, aiming to provide core technology and data support for research institutions, hospitals, and biopharmaceutical companies in key areas such as disease biomarker discovery, drug delivery system development, and fundamental mechanism research.

North America (especially the United States) is the absolute leader in global technology and commercialization, possessing the most concentrated core technology patents (such as ultrafiltration, SEC, and microfluidics), a mature CRO service industry chain, and the highest demand for scientific research and clinical trials, dominating the development of high-value-added services and standards. Europe follows closely behind, boasting a strong foundation in life sciences and formidable capabilities in standardized methodologies, quality control, and clinical translational research. The Asia-Pacific region (centered on China, Japan, and South Korea) is the fastest-growing and most dynamic market. Through rapid technology introduction and independent research and development, China is upgrading from providing basic extraction services

to establishing end-to-end, high-throughput solutions. Market competition is fierce, and price sensitivity is relatively high, but there is still a gap compared to Europe and the United States in terms of cutting-edge technology deployment. The global industry is evolving from fragmented scientific research services to providing standardized, large-scale production infrastructure for drug delivery and precision medicine.
