Exothermic chemical foaming agents (CFAs) are substances that, when decomposed, release gases and heat, creating a foamed structure within materials. These agents are widely used in industries such as plastics, rubber, and construction to reduce material density, improve insulation, and impart specific physical properties like strength and flexibility. Used to create lightweight foamed products like expanded polyethylene (EPE), polypropylene (EPP), and polyurethane foams. Incorporated into concrete and plasterboard to make lightweight construction materials with improved insulation. Widely used in the production of packaging materials like foam cushioning or insulation boards.
