ePTFE membrane is a new type of polymer material with a micron or submicron porous three-dimensional network microstructure. It is made of PTFE resin through special processing methods such as stretching and turning. While maintaining the excellent chemical properties of PTFE, through Change the structure, shape, thickness, and surface geometry of the material, and then match auxiliary materials with different characteristics to achieve different functions and uses.

The expanded polytetrafluoroethylene membrane market refers to expanded polytetrafluoroethylene (PTFE) membrane materials that provide high performance, chemical corrosion resistance and high temperature resistance for the needs of various industrial fields. With its excellent anti-corrosion and anti-corrosion properties, this membrane material is widely used in the lining, isolation and protection of pipelines, equipment and containers in chemical, pharmaceutical, electronic, food processing and other industries. The market not only meets the stringent requirements of the industry for material performance, but also has potential in terms of environmental protection and safety due to its excellent durability and reliability. It is expected to continue to be widely used and developed in various fields.
