The global Experimental Design Software market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Experimental Design Software, also known as DOE (Design of Experiments) software, is a tool designed to assist in the design and analysis of experiments based on the field of experimental design, which is a branch of applied statistics.

Experimental design, or Design of Experiments (DOE), is considered a field of applied statistics. It aims to design efficient experimental methods for situations where multiple factors influence each other, allowing for the mathematical analysis of results. Developed based on the ideas of the British statistician R.A. Fisher, it is built upon three principles known as Fisher's Three Principles: local control, replication, and randomization.

While conducting experiments based on experimental design can enhance efficiency and lead to meaningful conclusions, it requires specialized knowledge and experience due to its complex procedures. Experimental Design Software facilitates the process by providing templates for these procedures and automating the analysis, making experimental design and analysis more accessible.

United States market for Experimental Design Software is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Experimental Design Software is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
