The global Expired Food Destruction Service market size is predicted to grow from US\$ 3679 million in 2025 to US\$ 5423 million in 2032; it is expected to grow at a CAGR of 5.8% from 2026 to 2032.

Expired food destruction service refers to a service provided by professional organizations to harmlessly dispose of food that has exceeded its shelf life in an environmentally compliant manner. This service ensures that expired food does not re-enter the market, avoiding food safety risks. At the same time, it follows the principles of circular economy, converting organic waste into biogas, fertilizer or industrial raw materials, helping companies fulfill their environmental responsibilities and comply with the laws and regulations of various countries.

With increasingly stringent global food safety regulations, a growing focus on food waste, and strengthened corporate ESG (Environmental, Social, and Governance) responsibilities, the expired food disposal service industry is experiencing steady growth. Food manufacturers, supermarkets, and catering businesses need to regularly handle large quantities of expired or recalled products to avoid food safety incidents and brand risks. Simultaneously, governments worldwide are strengthening regulations on food waste management and promoting the resource utilization of food waste, such as bioenergy and organic fertilizer production, which is creating new business models for the industry. In the future, with the development of digital traceability systems, intelligent waste sorting, and the circular economy, expired food disposal services will gradually upgrade towards green processing, energy utilization, and intelligent logistics management, and market demand is expected to continue to expand.
