Abstracts

The global Expiry Date Tracking Software market size is predicted to grow from US\$ 1398 million in 2025 to US\$ 2293 million in 2032; it is expected to grow at a CAGR of 7.5% from 2026 to 2032.

Expiry Date Tracking Software is a digital tool designed to monitor the shelf life of products, enabling users to input, store, and track item information such as production dates and expiration periods. It features automatic alert functions (via pop-ups, notifications, etc.) to remind users of upcoming or expired items, and can integrate with inventory management systems, barcode scanning, or data analysis modules. Widely used in food, pharmaceutical, and cosmetic industries, it helps businesses and individuals reduce waste from expired goods, ensure compliance with safety regulations, and optimize inventory turnover efficiency.

Demand for Expiry Date Tracking Software is growing as industries like food and pharmaceuticals face stricter safety compliance requirements, and businesses seek to cut inventory losses from expired products. Individual consumers also need simple tools to manage household perishables. Key opportunities lie in developing industry-specific solutions (e.g., GMP-compliant versions for pharmaceuticals, batch-tracking features for food manufacturers), launching user-friendly mobile or cloud-based platforms with cross-device sync, and integrating IoT or AI to enable real-time monitoring and demand forecasting. Additionally, catering to small businesses with affordable, lightweight versions and offering customization for alert rules or data reporting can further expand market reach.
